^{*} The upper limiting dimension is given by the limiting deviation of the mass.

Excellent fatigue strength of endurance® dynamic hollow sections due to narrowest chamfer dimensions ≤1,8xT. Restricted tolerances compared to the hollow section standard EN 10219 enable repeatable automated processability.

AVAILABLE DIMENSIONS FOR SQUARE HOLLOW SECTIONS

In the table below you can find all technically producable rectangular tubes up to a yield strength of 600MPa according to the endurance dynamic factory standard. The difference in color indicates the surface finish.

The symbols indicate the possible forming technologies.
