# UPGRADE YOUR STEEL SURFACE

Functional surfaces: HDG – chromium-free passivation 2.0

actsheet clearcover<sup>®</sup> - HDG | Page 1/2 | 06/2024

## clearcover® – THE CHROMIUM-FREE PASSIVATION ON HOT-DIP GALVANIZED STEEL STRIP

Do you need a sustainable, temporary passivation with weldability and good processing properties? That's clearcover<sup>®</sup>.

clearcover<sup>®</sup> is the sustainable and environmentally friendly passivation system without any chromium or chromium compounds and is free from heavy metals such as molybdenum, manganese and cobalt.

Chromium-free passivation is a thin, transparent, washable polymer layer with special additives to improve corrosion resistance, adhesive and paint adhesion and to reduce the coefficient of friction during forming operations.

The highly innovative functional surface on hot-dip galvanized steel strip (HDG) is supplied in combination with zinc, zinc-magnesium and zinc-iron coatings pursuant to DIN EN 10346.

#### **TYPICAL APPLICATIONS**

- » Processing industry
- » House industry
- » Construction industry
- » Automotive industry

Reliable corrosion protection during transport

Good resistance to emulsions

Excelle

Excellent corrosion protection during storage

Sustainable and environmentally compatible passivation

Excellent weldability

Direct coatability

## clearcover®

#### **PROCESSING PROPERTIES**

clearcover<sup>®</sup> surfaces are ideally suitable for sheet metal working processes such as cutting, slitting and profiling. The chromium-free passivation exhibits excellent joining properties in spot welding, adhesive bonding and foam adhesion and shows good compatibility with forming emulsions. clearcover<sup>®</sup> can be removed with alkaline cleaning agents as required.

#### SUSTAINABILITY AND ENVIRONMENTAL PROTECTION

The sustainable and environmentally friendly functional surface is free of chromium compounds or heavy metals. The possible elimination of energy and resource-intensive process steps such as oiling, degreasing and rinsing/drying at the processing company reduces its ecological footprint.

#### CORROSION PROTECTION

clearcover<sup>®</sup> surfaces show a resistance to white rust after more than 96 hours of neutral salt spray testing pursuant to DIN EN ISO 9227 and over 50 cycles in alternating humidity and climate change testing (DIN EN ISO 6270-2 AHT). Setting new standards at voestalpine.

## DIRECT COATABILITY

clearcover<sup>®</sup> passivation can be painted directly as a powder coating or cathodic dip coating, even when cleaning processes have been omitted. This eliminates degreasing or other pre-treatment processes and energy-intensive drying steps at the customer. The result is a high level of environmental compatibility with constant or improved performance in terms of paint adhesion and corrosion protection.

### MULTIPLE CERTIFICATIONS

Certifications are naturally a minimum requirement at voestalpine in our effort to provide additional functional surfaces. In many applications, actual properties go far beyond the standard minimum requirements.

The information and product properties contained in this printed material are non-binding and serve the exclusive purpose of technical orientation. They do not replace individual consultation provided by our sales and customer service teams. The information and product properties provided in this fast sheet shall not be deemed guaranteed characteristics unless this has been agreed upon individually. Technical changes reserved. Errors and misprints excepted. No part of this publication may be reprinted without explicit written permission by voestalpine Stahl GmbH.
