

Product Information

Mild Steel

Mild Steel

Mild steel, also known as low carbon steel, is renowned for its outstanding properties and versatility. With a carbon content typically below 0.25%, it offers a balance of strength, durability, and cost-effectiveness, making it an ideal choice for various applications across industries.

Product Qualities

Some of the key qualities and advantages of our mild steel:

- » Superior Quality
- » Extensive Applications
- » Cost-Effective Solution
- » Excellent Weldability
- » Durability and Strength
- » Formability and Customization
- » Sustainable and Recyclable

The Product

At voestalpine High Performance Metals Africa we supply S355-J2 mild steel that is quality checked ideal for the use of brackets, die sets, parallels, spacers and more.

The material is available from 2.5mm up to 100mm thickness.

Value Added Services Available

Heat Treatment

Machining
